

Yash Dumpeta

yashcollege7777@gmail.com | +1 (734)-489-4826 | [Portfolio](#) | [Linkedin](#) | [Github](#)

Technical, product-minded engineer with experience across data pipelines, backend systems, and AI/ML prototyping. Skilled at translating ambiguous problems into clear requirements, partnering with engineering and cross-functional stakeholders, and shipping reliable, data-driven solutions.

EDUCATION

University of Michigan - College of Engineering

Ann Arbor, MI

B.S.E. in Computer Science and Engineering

August 2022 - May 2026

Relevant Coursework: AI, Computer Networks, Databases, UI/UX, Data Structures, Computer Organization

SKILLS

Languages: Python, JavaScript, TypeScript, C++, Go, SQL

Frameworks/Libraries: React.js, Next.js, Node/Express, Django, Convex, Pandas, NumPy, PyTorch

Tools/Methods: REST APIs, Docker, Kubernetes, PostgreSQL, MongoDB, Git, OpenShift, Vercel, Railway, AI tools

Product & Process: Requirements Definition, Roadmap Prioritization, Cross-Functional stakeholder collaboration, SDLC/Agile practices, Data Validation & QA

EXPERIENCE

Utilidata

Ann Arbor, MI

Software Engineering Intern

January 2025 - Present

- Designed a production ETL pipeline architecture for high-frequency (5.5 MB/min) telemetry, defining the storage format and structure to support downstream ML experimentation and real-time analytics on Utilidata's Gen7 platform.
- Prototyped a generative ML inference approach to reconstruct electrical load patterns from query-based inputs, designing the query interface and validating performance via local inference ahead of integration into the live analytics pipeline.

University of Michigan - Information and Technology Services

Ann Arbor, MI

Software Engineering Intern

May 2025 - December 2025

- Migrated Ape-db's 3,000+ research records to k8s/OpenShift, reducing setup errors by 40% and improving reliability.
- Upgraded the MICUSP corpus platform (829 academic papers) with Django + eXist-db enhancements and multi-stage Docker builds, improving global site stability while reducing image size by 60% and build times by 30%.

Spire Investment Partners,

McLean, VA

Technology and Cybersecurity Intern

June 2024 - August 2024

- Partnered with HR and operations stakeholders to redesign onboarding for 300+ employees, building an employee directory system and internal automation tools that cut onboarding time by 70% and supported client-facing ops for 200+ customers.
- Managed multiple projects concurrently from requirements gathering through delivery, leveraging daily standup meetings, SDLC best practices, and effective project management practices to prioritize scope and hit deadlines

University of Michigan - Information and Technology Services

Ann Arbor, MI

Technology Consultant

August 2025 - May 2026

- Diagnosed technical issues across macOS, Windows, and university-managed systems, translating complex system behavior into clear actionable next steps/fixes for non-technical students, faculty, and staff

PROJECTS

TabChop: *TypeScript, Next.js, React.js, Convex, Convex Auth, Tailwind CSS, Vercel*

[App](#)

- Founded and led end-to-end product development of a real-time receipt-splitting workflow that transforms a high-friction group problem (manual math, payment coordination) into a seamless 3-step flow: upload, invite, claim, and simply pay.
- Prioritized adoption-focused product decisions (image upload/parsing, guest access, multi-channel invites via link/QR/4-letter code) by balancing user needs, technical complexity, shipping speed, and overall customer experience.
- Balanced speed and correctness by defining allocation rules for shared items/taxes/tips/discounts and shipping a transparent, itemized payment summary to reduce disputes, increase trust between participants, and prioritize simplicity

UMazing: *Next.js, Node.js, React, TypeScript, Python, PostgreSQL, Railway, Vercel*

[App](#) | [Devpost](#)

- Collaborated with a team of developers @ MHacks 24 to develop and pitch an AI-powered academic advisor that enhances student decision-making for course selection and educational planning through an analysis of course audits
- Co-led backend development, processing and analyzing user-inputted PDFs of student audit checklists, and developed Python and Node.js scripts to scrape and parse 400+ EECS courses and flex-techs from school websites and Google Sheets
